**Subject:** Area 40 update  
**Attachments:** Char sample location map.pdf; J60845-1 UDS Level 2 Report Final Report (Char samples).pdf

Hi Everyone – We have completed the remaining perchlorate over-excavation and the initial dioxin excavation. The attached map shows the location of the dioxin excavation. We collected samples on 8,000 sqft grid spacing per the attached map. Results have been received. The laboratory calculates the Total Dioxin/Furan-TEQ for us and includes it in the toxicity section of the laboratory report (starts on page 24 of .pdf). Based upon the results, only one location, Char-S-005 exceeded the cleanup goal of 6.8ng/Kg. We will be going to the site on Tuesday to collect samples from the Char-S-005 1000sqft sub-grid in attempt to pinpoint where the over-excavation needs to occur. The sub-grid is also shown on the attached sample location map. Samples will be placed on 5-day turn around and we anticipate over-excavation activities to occur the week of June 8.

Ambient air monitoring devices were deployed today and will be in place for 14 days. These will be retrieved prior to conducting additional excavation activities.

The revised RDIP#2 should be submitted next week for your final review along with a work plan for additional characterization to finalize the design of the PRB. We would like to get into the field in mid-June to conduct the additional characterization, so please focus your efforts on reviewing the work plan first.

Let me know if you have questions. Have a great weekend! Chris
